

Discomfort...

that Chiropractic care can start with infancy?

Many parents have their newborns checked by a Doctor of Chiropractic right away, since significant spinal trauma can occur at birth. Even "natural" birthing methods can stress an infant's spine and developing nerve system.

The resulting irritation to the nerve system caused by spinal and cranial misalignment can be the cause of several newborn health complaints including:

- Colic
- Breathing problems
- Nursing difficulties
- Sleep disturbances
- Allergic reactions
